

MPH@UNC Practicum Advisers

To provide more consistent, equitable, and streamlined practicum assistance, effective Fall 2023, Practicum Advisers will provide support to students in their concentration throughout the practicum planning, implementation, and evaluation process.

Practicum Advisers:

- Assist students in refining goals for their practicum experience;
- Review and provide feedback on learning agreements to ensure the proposed scope of work accounts for all steps entailed in producing the products and is feasible for the timeframe;
- Troubleshoot and provide technical assistance throughout the practicum;
- Assess student's practicum products for competency demonstration (CEPH requirement).

Based upon concentration, the following faculty are the assigned Practicum Advisers:

- **Applied Epidemiology** – Dr. Kris Young (kristin.young@unc.edu)
- **Nutrition** – Dr. Seema Agrawal (seema.agrawal@unc.edu)
- **Leadership in Practice** – Assigned Faculty Mentor

Applied Epidemiology and Nutrition students still have an assigned concentration Faculty Mentor to support and guide them in other aspects of the MPH@UNC program, but all practicum-related support will come from the Practicum Adviser and the [Practicum Team](#).
